

## Ida to Bring Heavy Rainfall to Most of the Area Tomorrow

### Forecast Details:

- Remnants of Ida will begin to arrive to Middle TN from the southwest this afternoon into this evening. Showers and t'storms will become widespread on Tuesday before moving off to the northeast early on Wednesday.
- **Flash flooding is possible, especially on Tuesday** as the heaviest rain moves through.
- A Flash Flood Watch is in effect from 7 PM Monday until 1 AM Wednesday.
- **Widespread 2" to 5" is expected** with locally higher amounts upwards of 6" possible.
- Storms producing damaging winds & isolated tornadoes cannot be ruled out tonight into early tomorrow, mainly south of I-40.
- More information about Ida on the second page.
- Ida will move out of our area by Wednesday evening, leaving behind drier conditions for the foreseeable future.

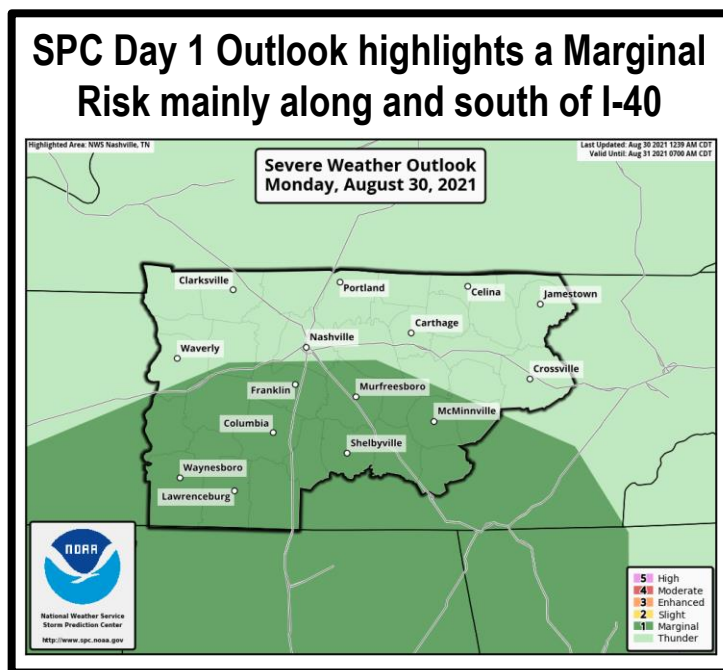

## Key Forecast Points for Ida:

**Impacts:** Showers and t'storms will begin in our southwestern counties this afternoon before spreading northeast overnight into tomorrow and ending Wednesday. **Flash flooding is our biggest concern with this system**, as widespread rainfall amounts of 2" to 5" is possible will locally higher amounts. Cannot rule out severe weather (damaging winds / isolated tornadoes) late tonight into tomorrow, but this is highly dependent on Ida's eventual path. Gusty winds upwards of 20 to 30 mph will be possible tomorrow and Wednesday.

**Timing:** Tonight through Wednesday morning. Heaviest rain expected tonight through Tuesday, although showers could begin as early as this afternoon.

**Areas Impacted:** All of Middle TN.

**Confidence:** Confidence remains moderate for rainfall amounts, timing, and flooding potential. Confidence is low/moderate for severe potential.

## Hazard Levels:
